

JVA A301

· Specification summary

Device class	Directional Volt Meter
Measurement functions	Digital voltage and current measurements are listed for the directional fault finder. No numeric range or accuracy is established by this card.
Fault-direction indication	Illuminated arrows indicate the direction of an electric-fence fault; they do not measure a guaranteed distance to the fault.
Operating control	One-touch operation is listed; check the actual operating instructions and safe test method.
Pulse-polarity recognition	Automatic pulse-polarity recognition is listed. Compatibility with the actual energizer and fence remains to be checked.
Low-battery indication	A low-battery warning is listed. Confirm the required battery for the supplied version.
Display backlight	A backlit display is listed for reading the instrument.
Replaceable battery	A user-replaceable battery is described. Battery type, inclusion and runtime require confirmation; the adjacent digital meter specifications are not used.
Lead arrangement	The directional-meter card describes operation without external wires or clips. This is not a guarantee against electric shock or permission to touch a live fence.
Regional reference	The catalogue marks A301 as the SA reference and separately prints an Australian ordering code. This does not rename the ISD record or confirm Malaysian supply.

Specifications are summarised from the manufacturer's published information (checked 2026-10-20). They describe the cited version only. Confirm the exact model, suffix and supplied revision before ordering. ISD confirms supply, price, availability and warranty separately.
