

JVA N720JVA

· Specification summary

Device class	Fence Line Lightning Diverter
Intended application	A fence-line diverter reference for long agricultural or wildlife fence lines. Site suitability and the complete protection design require confirmation.
Protection arrangement	A choke and arc gap are described within one diverter. This does not establish an absolute protection level for every surge.
Arc-gap selection	An adjustable arc gap is listed. Adjustment and earthing must follow the actual manufacturer instructions and qualified design.
Terminal arrangement	Large protected terminals are listed. Wire size, torque, touch protection and the supplied cover require confirmation.
Housing arrangement	The catalogue describes a V-shaped diverter body. Its shape is not a substitute for verified earthing and surge coordination.
Environmental reference	The card describes a water-resistant design for external installation. No numeric IP rating or independent weather test is established here.
Protection limitation	The catalogue explicitly warns that no lightning-protection kit can guarantee protection against a strike. Select and verify the complete protection system.

Specifications are summarised from the manufacturer's published information (checked 2026-10-20). They describe the cited version only. Confirm the exact model, suffix and supplied revision before ordering. ISD confirms supply, price, availability and warranty separately.
